Summary

Experienced full stack software engineer with 6+ years of experience designing and delivering data-intensive, cloud-based products across complex technical and enterprise environments. Experienced in owning product features from problem discovery and technical design through implementation, production support and continuous improvement. Product-focused, with a strong ability to translate complex customer and business problems into reliable, intuitive software.

- Strong proficiency in Python, TypeScript, Node.js and tools across both ecosystems
 - Strong expertise in designing and developing data-driven and event-driven systems
 - Extensive full stack experience across a range of frontend and backend technologies
 - Strong experience with AWS cloud services and equivalent technologies across other major cloud platforms
 - Comfortable with AI-assisted development tools and knowledgeable about modern AI technologies
-

Work Experience

Senior Software Developer (Contract) - **BHP**

Perth, WA | June 2024 - Feb 2026

Tech Stack: Python, TypeScript, C#, React, Terraform, Docker, AWS

Developed MPC, a near-real-time operational decision-support product that helps mine controllers improve primary crusher performance, truck fleet dispatch, and operational decision-making.

- Owned and delivered product features across backend services, data processing, and user-facing workflows.
- Built near-real-time data pipelines integrating PI Web API, fleet management systems, downtime events, and material characteristic data.
- Enhanced live truck visibility by adding ETA and operational status information.
- Implemented crusher health monitoring and automated shift reporting for operational teams.
- Developed a rule-based weighted scoring model to rank truck and material combinations and recommend optimal sequencing and blending strategies.
- Worked closely with Project Delivery, Operations SMEs, and data teams to understand user needs, investigate production issues, and implement sustainable long-term solutions.

Frontend Developer (Contract) - **NTT DATA**

Perth, WA | May 2023 - August 2023

Tech Stack: Python, Dash & Plotly, Flask, React, Azure

Upgrading the client's legacy Power BI application with specified tech stack Dash & Plotly, and collaborating with different teams to demonstrate fully functional prototypes to stakeholders.

- Migrated a legacy Power BI application to Dash & Plotly, improving flexibility and performance.
- Designed a caching mechanism to optimize handling of large data sets and reduce latency.
- User training and documentation.

Full Stack Developer - **Pointerra**

Perth, WA | June 2022 - December 2022

Tech Stack: Python, Django, Vue, AWS, LiDAR, 3D spatial data

Maintained and enhanced the Digital Twin system, and assisted in migrating the new workloads from users to the cloud.

- Developed a one-click walkthrough feature for the marketing team and created an interactive onboarding experience for new users.
- Implemented a notification feature for better tracking system errors and warnings, easier for dev team to be aware and fix the issues.
- Migrated and transformed a portion of workloads to be cloud-based and assisted in the deployment process for Pointerra's SaaS applications.

Software Developer - **Idoba (Atomorphis)**

Perth, WA | November 2020 - June 2022

Tech Stack: React, Redux, Deck.gl, Mapbox, Material UI, FastAPI, Postgres, Docker, AWS

Helped build Gemini, a complex data visualisation product, from initial concept through production delivery. Led the design and development of the frontend application and collaborated closely with the CTO on backend architecture and service development.

- Built highly interactive geospatial and data-rich interfaces that made complex information easier for users to explore and understand.
- Contributed across the full product lifecycle, including discovery, prototyping, technical design, implementation, deployment, and continuous improvement.
- Worked closely with product stakeholders to translate evolving requirements into practical, user-focused features.
- Continued developing Gemini through Atomorphis's acquisition by Idoba and remained with the business until the transition was completed.

Software Developer - **Lianjia**

ShangHai, CHINA | January 2019 - September 2020

Tech Stack: Python, Django, Celery, Node.js, React, Redux, Alibaba Cloud

Ensure that the platform consistently delivers optimal user experiences across both PC and mobile devices, actively engage in hotfixes in the on-call team.

- Maintain the stability of the platform's system at all times while 3 months on-call team.
 - Setting up an alarm system to trigger when the error queue exceeds a threshold in Celery.
 - Earning rewards of both full-attendance bonus and outstanding performance in 1st year.
-

Education

Bachelor of Science (Computing) - Software Engineering

Curtin University, Perth WA | Aug 2014 - Dec 2018
